

# Importing Video from Camera

Name: \_\_\_\_\_

HR: \_\_\_\_\_

Date: \_\_\_\_\_

**1** Connect camera to computer with the **Firewire cable**.

The small end goes into the camera, and the large end goes into the computer.

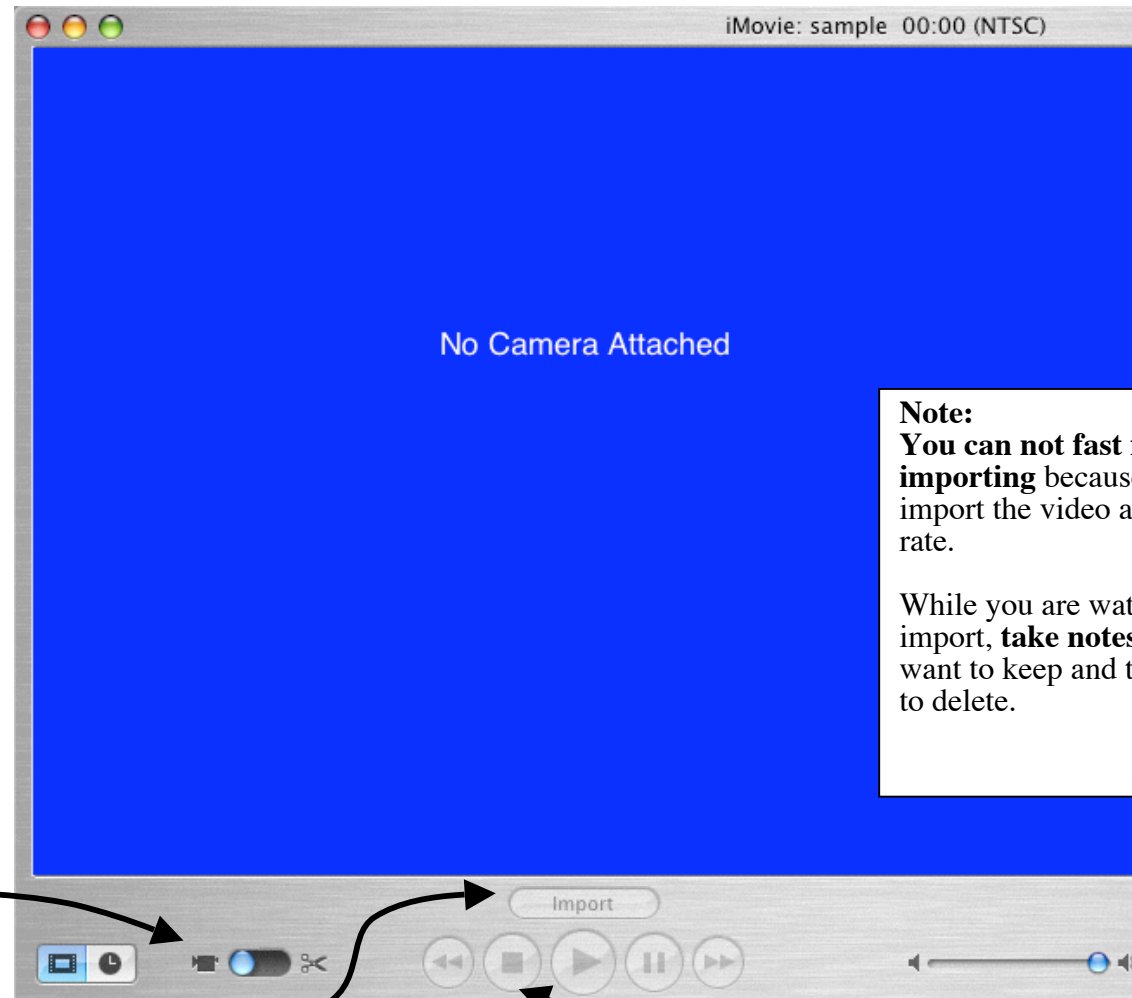

**2** Turn camera **on**. Set camera to **play**.

You may need to rewind to the beginning of your tape. When the camera is connected, simply press the **rewind** button in iMovie.

Be sure to **plug in the camera** while importing so the battery continues to charge.

**3** Set iMovie to the **import** function.

**4** Click the **import** button to start adding clips to iMovie.

**Note:**  
**You can not fast forward during importing** because the camera will import the video at the fast forward rate.

While you are watching the film import, **take notes** on the clips you want to keep and the ones you want to delete.

Remember: You can **split clips** as you import by clicking **stop**

Or you can split them later by going to: **edit, split clip at playhead**.
